

Rizaldo Setiawan

+6282248467955 | rizaldo.setiawann@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Mobile developer with 2 years of experience building and shipping Android and Flutter apps to Play Store and App Store, from UI design to release. Experienced with Kotlin, Jetpack Compose, and Flutter, plus real-time features (MQTT, WebSocket, FCM) and backend development with TypeScript.

Work Experience

Lintas Cakra Cipta - Indonesia (Onsite)

Oct 2025 - Now

Mobile Developer & Backend Developer

Raja Derek V2 (Flutter)

- Owned end-to-end development of RajaDerek v2, a B2C towing service ordering app, covering UI design, API integration, and release
- Built multi-stop order flow with Maps integration: one pickup point and 3-5+ dropoff points
- Implemented real-time driver location tracking via MQTT
- Built real-time chat between customers, drivers, and admins using WebSocket, also used for live data auto-refresh
- Integrated FCM push notifications and Firebase Remote Config

Salesforce (Backend)

- Developed the backend for an internal sales system covering financial records and prospect management
- Built a notification system and a PDF generation worker
- Stack: Hono, TypeScript, Drizzle ORM, PostgreSQL, BullMq

Feedloop.ai - Indonesia (Remote)

Dec 2024 - Oct 2025

Freelance Android Developer

- Migrated map implementation from OpenStreetMap to Google Maps API to improve location accuracy and data completeness
- Implemented FCM deep linking to route users directly to relevant screens from promo and order notifications
- Integrated Firebase Remote Config to manage app maintenance mode and dynamic API base URL configuration
- Resolved multiple UI bugs across existing screens, improving overall app stability

Diskominsa Aceh Jaya - Indonesia (Onsite)

Jun 2024 - Dec 2024

Mobile Developer

- Independently designed and developed a public government information app for Aceh Jaya, covering the full cycle from UI/UX design to deployment on Play Store and App Store using Flutter, reaching 100+ downloads
- Built core features including local news integration (provincial and regional), a directory of SKPK contacts and descriptions, and a public issue-reporting module for community complaints
- Implemented BLoC architecture for scalable and maintainable state management
- Integrated RESTful APIs with JSON serialization for data synchronization between the app and backend services
- Added bilingual localization (Indonesian and English) to broaden accessibility
- Built custom reusable widgets and animations to maintain consistent UI/UX across the app

Wisnu - Indonesia (Remote)
Android Developer

Jun 2023 - June 2024

- Developed Wisnu, an Android travel app that recommends destinations by region, from scratch to Play Store release using Jetpack Compose
- Built the recommendation experience on the client side, integrating with a backend AI service that generates personalized travel suggestions
- Implemented MVVM architecture with Hilt and Retrofit to keep the codebase modular and testable
- Worked in a PR-based Git workflow, coordinating with backend, design, and QA teams to deliver features

Politeknik Negeri Lhokseumawe - Indonesia (Onsite)
Mobile Developer

Sept 2023 - June 2024

- Led the design and development of a comprehensive Student Service System application, focusing on intuitive UI/UX using Flutter.
- Implemented BloC architecture for efficient state management and to ensure scalability and maintainability of the code.
- Collaborated closely with the university rector to deeply understand user needs and translate them into actionable app features.

Education Level

Politeknik Negeri Lhokseumawe - Lhokseumawe, Indonesia
Bachelor Degree in Informatics Engineering, 3,75/4.00

Aug 2019 - Aug 2023

- Course : Programming Fundamental, Data Structure and Algorithm, Database, Object Oriented Programming and Mobile Programming

Bootcamp And Volunteering Experience

Bangkit Academy - Indonesia
Mobile development Student

Feb 2023 - Jul 2023

- Android Development Trainee with a focus on mastering Kotlin for mobile applications.
- Strong proficiency in app development, testing methodologies, and implementation of MVVM and MVP architecture, leading to a top 20-ranked capstone project.
- Secured startup funding based on innovative solutions developed during the capstone project.

VSGA - Indonesia
Junior Mobile Programmer

Jul 2022 - Okt 2022

- Actively participating as an Android Trainee, specializing in Kotlin for application development.
- Demonstrated proficiency in building apps, testing, and applying design patterns like MVVM or MVP, leading to recognition as the top-performing trainee and earning BNSP certification as a Junior Mobile Programmer.

Skills, Achievements & Other Experience

- **Tools:** Android Studio, Kotlin, Compose, Flutter, SQL, Firebase, Postman, Jira, Git, Espresso, JUnit.
- **Technical Skills:** Android Development, SDLC for Mobile Apps, Bug Tracking (in Android Studio), Firebase Integration, Version Control with Git.
- **Language Proficiency:** English (Intermediate), Bahasa Indonesia (Fluent).
